Lunar Explorations:
15. Alphonsus

Best seen: April 11 & 12 (morning); April 28 (evening), 2023.

Circa 1900. William Pickering attributed indistinct, dark areas on the crater floor to changing vegetation. He believed that he also saw snowstorms on its central peak.

Lunar Explorations:
16. Bullialdus

Best seen: April 2 (evening); April 14 (morning), 2023.

Circa 1900. Suspected snowstorms on the central peak were glimpsed by William Pickering.
