Dear Chairs Baldwin and Aderholt and Ranking Members Capito and DeLauro:

The undersigned organizations are members of the Friends of NICHD, a coalition of professional societies and patient advocacy groups with a vested interest in promoting and sustaining the vital research activities of the Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD).

The Friends of NICHD are grateful for the strong, bipartisan support your subcommittees have given the National Institutes of Health (NIH) and NICHD. Thanks to your leadership, NIH has received significant increases in funding in recent years. The Friends of NICHD urge you to continue your support of NIH and NICHD in Fiscal Year (FY) 2024. Our coalition has endorsed the Ad Hoc Group for Medical Research FY 2024 funding recommendation, which would provide the NIH with $50.924 billion in funding, a $3.465 billion increase over the agency’s FY 2023 level. In light of our support for this funding increase at NIH, we also call for NICHD to receive a proportionate increase, bringing its funding to $1.877 billion in FY 2024, an increase of $128 million over FY 2023. We further request that NICHD’s base budget in FY 2024 grow at the same rate as the NIH’s base budget overall in FY 2024 spending legislation. In addition, we request that any funding provided for the Advanced Research Projects Agency for Health (ARPA-H) funding supplement, and not supplant, the base funding for NIH and NICHD.

NICHD has made extraordinary achievements in meeting the objectives of its biomedical, social, and behavioral research mission, including research on pregnancy; reproductive biology; women’s health throughout the life cycle; maternal, child, and family health, including mental health; learning and language development; population health; and medical rehabilitation. For instance, NICHD-funded researchers have recently:

- Identified micronutrients with the potential to counteract the detrimental effects of
exposure to toxic metals during early childhood and adolescence.

- Developed a prototype gene-based risk score to predict the development and severity of uterine fibroids.
- Found that the amygdala, a structure in the brain found to be enlarged in children diagnosed with autism spectrum disorder, begins its accelerated growth in infancy.
- Identified gene pathways in the placenta regulating infant birthweight, information that may aid additional studies to improve fetal growth outcomes and health.
- Developed an approach, with support from NICHD's National Center for Medical Rehabilitation Research (NCMRR), for individuals with a powered leg prosthesis using data during real-time use of the prosthesis to enhance a user's ability to perform complex activities.
- Determined that depression may be a risk factor for problematic social media use, to the point of it interfering with daily functions of both children and adults.

These are just a few examples of the institute’s essential work across a broad range of disciplines.

In addition to the institute’s important contributions to our understanding of human health and development, NICHD plays a unique leadership role within the NIH by advocating for the inclusion of its populations in research funded across the agency and by acting as a convener and collaborator. The trans-NIH Pediatric Research Consortium (N-PeRC), established in 2018 to better coordinate pediatric research activities across multiple institutes and centers, illustrates this work. The forum has fostered effective collaboration NIH-wide to drive the pediatric research agenda, identify synergies in child health-focused research being conducted in other institutes, and combine resources to fund important cross-cutting studies. NICHD was able to leverage N-PeRC from the earliest days of the COVID-19 pandemic to quickly identify and fund pediatric research needs. NICHD has also demonstrated a commitment to advancing research specific to pregnant and lactating women. This commitment is highlighted by the institute’s work on the Task Force on Research Specific to Pregnant Women and Lactating Women (PRGLAC), which developed recommendations to promote the development of safe and effective therapies for pregnant and lactating women and support greater inclusion of this population in clinical trials.

With increased support in FY 2024, NICHD will be able to continue funding research and training activities to advance its mission and help unlock the next generation of cures for populations under its purview. As you consider NICHD’s funding level in FY 2024, we request that you ensure the institute’s funding level keep pace with the rate of growth at the NIH overall. While we strongly support continued investments in NIH’s base funding, investments in NIH have not been shared evenly across the agency in recent years, creating a disparity in resources that threatens to stall continued progress in NICHD’s work.

In addition, Congress authorized the Advanced Research Projects Agency for Health (ARPA-H) in FY 2023 as an autonomous agency within the NIH, providing $1.5 billion to advance ARPA-H’s unique focus on targeted research traditionally beyond what is supported by the NIH and NICHD. As ARPA-H ramps up its work in targeted research areas and its focus on accelerating the development of commercial products, we urge the Committee to ensure any funding provided for ARPA-H supplement, and not supplant, the base funding for NIH and NICHD.
We thank you for your longstanding support of the NIH and encourage you to make NICHD a top priority by supporting the funding level of $1.877 billion as you work on the FY 2024 Labor-HHS appropriations bill.

Sincerely,
